Dzyga's Paw

2025 ANNUAL REPORT

Dear friends, partners, and supporters,

2025 marked the fourth year of full-scale war, and for us at Dzyga's Paw, it was a year of meaningful growth.

We raised and delivered $2 million in equipment to Ukraine's defenders and welcomed over 3,000 new donors to our community. As our impact has scaled, we have maintained efficient operations, and the team has successfully regrouped. Each of us takes great pride in our commitment to discipline, doing our best to support the Ukrainian Defence Forces.

This year, we expanded our focus beyond the immediate front lines. We formed a new strategic partnership with a prominent Ukrainian university to help train the next generation of engineers. Winning this war requires investing in people, not just in equipment.

As we enter 2026, we are set for success with a bold vision: to forge stronger industry partnerships, enhance our connections with Ukrainian and international defense innovators, and commit to equipping Ukraine's Defense Forces with the critical technologies they need.

Everything we're working towards wouldn't be possible without you. Thank you, from the bottom of my heart. And stay tuned. Exciting things are on the horizon!

With gratitude,

Iryna & the Dzyga's Paw team

4 YEARS

of the full-scale
Russian invasion of Ukraine

We remember all the heroes who gave their lives defending Ukraine.

These are not just names to us. They are friends: warriors we had the honor of supporting, visiting, and knowing personally.

We carry them with us.

Your words are what keeps us going

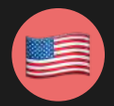

I pray for your victorious return to your family. We are a lot around the world that do so! From Denmark I send my warmest thoughts and wishes for the best possible Christmas 2025 and an even better New Year. We Danes love you!.

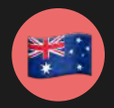

still wishing you all the very best, sendings sincere hugs, sorry i cannot send more :(- greetings from frankfurt / germany - +

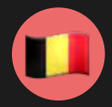

Donation relayed from my mother, she's rage donating at the age of 70, and she wants you to know that Ukraine must and will win against this evil.

I am American. Son you are what makes and made America great. May Karma protect and bring you great fortune and rewards in life. I wish I was there to help you and the ukrainians. I give what I can. Slava Ukraine.

As I am an Australian Secret Santa I watch the brave Ukrainian people from the other side of the world. It is obvious that you are fighting for your countryman and for the rest of the free world. Look after yourself as best you can. Stay safe. Anne.

A small transmission through the static.

Not enough to stop the noise, not enough to undo the damage but enough to say

I'm still listening.
For the nights without silence, for the lights that stay on anyway, for people refusing to disappear.

I love Ukraine.
This is what I can send.
Let it reach you.

I am 84 so I cannot come and join the brave ones who have stayed to fight; reverse the numbers to 48 and yes I would have, Good fortune to you all for 2026 and beyond.

Jonas 🇸🇪

Supporting Dzyga's Paw
since April 2025

First and foremost, Ukraine must win this war.
I have chosen to continue supporting Dzyga's Paw because everything is completely transparent regarding incomes and expenses.

Alex first joined us through the NAFO community, supporting our creative projects and standing with Ukraine online. In 2025, he joined one of our frontline trips and visited Ukrainian military units, choosing to see the work and the impact up close.

He reminds us that solidarity is not passive — it is active, engaged, and courageous.

NEW TRENDS

Seeing the Drone Before It Sees You

In 2025, we enhanced safety with new capability: portable drone detectors

Average cost per device that saves lives

$500

30 Detectors delivered in 2025

HOW A DRONE DETECTOR WORKS

1. Detector intercepts the analog FPV video signal in real time

2. Soldier sees what the drone sees — seconds before impact

3. Team reacts: take cover, reposition, or engage the drone

Serhii Flash, Military Tech, Radio and Signal Expert & Adviser to Ukraine's Minister of Defence

"Nothing is more terrifying than seeing your vehicle as a target through the eyes of an FPV pilot. FPV video signal detectors help save lives and warn of danger."

Our detector shows the video from the enemy's drone

Jamming the Signal to save the crew: we increased the Investment in Electronic Warfare in 2025

Artillery howitzer after an FPV attack

Invested in EW in 2025

$234K

2.6× more than 2024 ($87K)

✗ THREAT: **FPV KAMIKAZE DRONES**

The #1 threat in modern warfare.

One FPV strike can destroy a $3M+ SPG.

✓ SOLUTION: **EW JAMMING DOME**

Jams FPV control frequencies.

Drone loses signal and falls before reaching the target.

Commander, AHS Krab gun
26th Artillery Brigade

FPV drones are fast, precise, and deadly, and they're coming for artillery. More than once, a drone entered our position and lost control mid-flight — falling before it reached the gun. That's the EW system from Dzyga's Paw doing its job. Saved equipment, saved ammunition, saved lives

The amount of strike drones taken down over a single artillery position

Supply Chains Move Slow. Field Engineers Don't.

In 2025, we increased our support for drone engineering workshops

Worth of Drone Components Delivered

$135K

6

Active Field Workshops Supported

WHY WORKSHOPS WIN

Speed & Adaptability

Switch frequencies, adapt video systems, modify builds — in days, not months

Cost Efficiency

No sales margin from commercial companies, saving on engineering by involving the active military serviceman

Frontline Intelligence

Workshops work directly with pilots daily; they know exactly what's needed, right now

Kovbasa, Sergeant, Drone Unit, 47th Mechanized Brigade

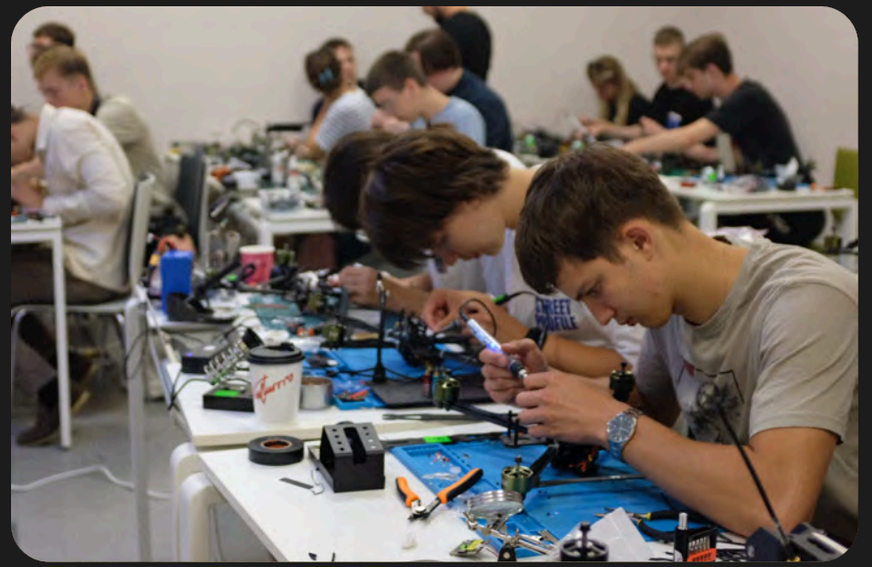

Working with limited resources forces you to find the best possible ratio of cost, capability, and battlefield effectiveness. With minor modifications, a kamikaze FPV becomes a reusable bomber - the same airframe flying dozens of missions, saving resources, cutting costs, and multiplying the output of the entire drone unit

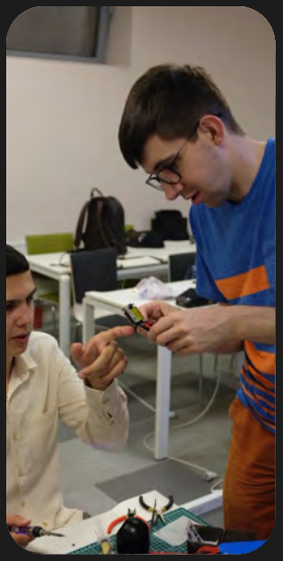

THINKING STRATEGICALLY

UAV SUMMER SCHOOL

- We launched a hands-on study program training students in engineering, integrating them into mil-tech ecosystem and motivating to consciously choose careers in Ukraine's defence sector.
- Curriculum spans UAV engineering (assembly, soldering, radio), FPV piloting, 3D modelling & printing, and defence industry fundamentals
- First cohort results: 15 graduates, 12 drones built, 3 graduates continuing advanced drone projects.

APPLIED SCIENCES FACULTY

15 Students graduated
